Practical 7

Aim: To install and create a **Virtual Machine (VM) using KVM** and configure the following:

a) Check KVM launching
b) Create a VM and connect it to KVM
c) Install **TrueConf Server / create a network bridge**

-> Use VMware for this
open vmware -> ubuntu -> terminal
Step 1 Install KVM
Open **Terminal** and run: sudo apt update
Install KVM: sudo apt install qemu-kvm libvirt-daemon-system libvirt-clients bridge-utils virt-manager

---

Step 2 Verify KVM Installation

Run command: kvm-ok

Output should show: KVM acceleration can be used

If yes → KVM working ✅

Step 3 Start Virtualization Service

Run: sudo systemctl enable libvirtd, sudo systemctl start libvirtd

Check status: sudo systemctl status libvirtd

Step 4 Open Virtual Machine Manager

Run: virt-manager

GUI window **Virtual Machine Manager** will open.

Open VMware t

Step 5 Create Virtual Machine

Inside **Virtual Machine Manager(VMWARE)**

Click: Create New Virtual Machine

Select: Local install media (ISO image)

Click **Forward**

Step 6 Select Operating System ISO

Choose OS image:

Example: ubuntu-22.04.iso

Click **Forward**

Step 7 Allocate Resources

Set resources like:

RAM: 2048 MB

CPU: 2

Click **Forward**

Step 8 Create Virtual Disk

Create disk:

Storage: 20 GB

Click **Forward**

Step 9 Name Virtual Machine

Example:

VM Name: Ubuntu_VM

Click **Finish**

VM will start installing the OS.

Step 10 Create Network Bridge

Open terminal and edit network configuration: sudo nano /etc/netplan/01-netcfg.yaml

Example configuration:

```
network:
  version: 2
```

```
  renderer: networkd
  ethernets:
    enp0s3:
      dhcp4: no
  bridges:
    br0:
      interfaces: [enp0s3]
      dhcp4: yes
```

Apply configuration: sudo netplan apply

Network bridge created ✅

Step 11 Install TrueConf Server

Download TrueConf server.

Example command: wget https://trueconf.com/download/trueconf-server.deb

Install: sudo dpkg -i trueconf-server.deb

Start service: sudo systemctl start trueconf

Result

- KVM installed successfully
- Virtual Machine created
- Network bridge configured
- TrueConf server installed
