Where to Add the Methods

Open your service file:

Source Packages

→ server

→ currency.java

Inside the class:

public class currency {
Add the methods **below the existing method**.
Example structure:
public class currency {
// methods go here
}

PART 1 — Addition Method
Method Code

```
@WebMethod(operationName = "Addition")
public double addition(double a, double b) {
   return a + b;
}
```

What It Does
Input: 5 , 3
Output: 8

PART 2 — Subtraction Method
Method Code

```
@WebMethod(operationName = "Subtraction")
public double subtraction(double a, double b) {
   return a - b;
}
```

Example:
10 - 4 = 6

PART 3 — Multiplication Method
Method Code

```
@WebMethod(operationName = "Multiplication")
```

```
public double multiplication(double a, double b) {
   return a * b;
}
```

Example:

5 * 6 = 30

PART 4 — Division Method

Method Code

```
@WebMethod(operationName = "Division")
public double division(double a, double b) {
   return a / b;
}
```

Example:

10 / 2 = 5

PART 5 — Factorial Method

Method Code

```
@WebMethod(operationName = "Factorial")
public int factorial(int n) {
   int fact = 1;
   for(int i = 1; i <= n; i++) {
      fact = fact * i;
   }
   return fact;
}
```

Example:

5! = 120

PART 6 — Calculator Method (All Operations)

This method performs **basic arithmetic operations**.

Method Code

```
@WebMethod(operationName = "Calculator")
public double calculator(double a, double b, String op) {
   if(op.equals("add"))
      return a + b;
   else if(op.equals("sub"))
      return a - b;
   else if(op.equals("mul"))
      return a * b;
```

```
  else if(op.equals("div"))
    return a / b;
  return 0;
}
```

Example:

calculator(10,5,"add") → 15

calculator(10,5,"mul") → 50

Prime Number Method

Method Code

```
@WebMethod(operationName = "PrimeNumber")
public String primeNumber(int n) {
  int count = 0;
  for(int i = 1; i <= n; i++) {
    if(n % i == 0) {
      count++;
    }
  }
  if(count == 2)
    return "Prime Number";
  else
    return "Not Prime Number";
}
```

Example

Input: 7

Output: Prime Number

Input: 8

Output: Not Prime Number

After Adding the Method

1. **Save the file**
2. Right-click project -> CurrencyService
3. Click -> Run or Deploy
4. Go to

Web Services

→ currency

→ Test Web Service

Now you will see the new method: PrimeNumber

1️⃣ **Save the file**

2️⃣ Right click project -> CurrencyService

3️⃣ Click -> Run or Deploy

4️⃣ Open Web Service test page:

Web Services

→ currency

→ Test Web Service

You will now see methods like:

Addition

Subtraction

Multiplication

Division

Factorial

Calculator
